Reading Response 1

This Professional Writing course is highly distinguished from preceding English composition courses. It focuses on composing passages throughout my later career endeavor, thereby enhancing me in attaining particular goals during composition more professionally. I believe innovation is one of my strengths, so learning creativity will be beneficial.

I hope learning practical applications related to organizations can make me constructive. As Spinuzzi emphasizes, it is significant to study implementations and disruptions, making it vital analysis. As per his article, "Redesigning implementations and testing them to make sure they actually solve the issues" (Spinuzzi 21). I believe that SEObate are demonstrating operations and their interruptions. At certain time, they perhaps threaten the existence of the organization structure. I am looking forward to learn to inspect the systems of the organization more thoroughly to solve communication issues. Recommendation of helpful intuitiveness toward mechanisms of institutions and corporations is a crucial purpose of this book. I believe that this is the way to avoid problems from worsening.

Meanwhile, for the Slack, Miller, and Doak's article, their emphasis regarding the power dynamics occurring during information exchange made me surprised with "role in the articulation and rearticulation of meaning and power" (Slack et al. 33). I crave to

adhere to the development of conciseness through technical communicators. The authors favor the argument toward the awareness technical communicators when discussing. Furthermore, I am delighted of the emphasis of cruciality to comprehend the utilization where technical communication occurs. I hope that in this course, I can learn how to make communicate technically to positively influence society.
